

# Bollards

-  Non absorbing
-  Weather proof
-  Ever lasting
-  Recycled

## - Bollards

Bollards are uniquely manufactured from 100% recycled waste plastics including recovered agricultural polythene films. This waste film is mostly used silage wrap and is recovered from farms throughout the UK and Ireland. It is this feedstock which gives bollards the exceptional high strength properties which are far superior to its competitors.

The environmental credentials for all products are without parallel. The collected waste agricultural films are recycled into plastic pellets and subsequently re-manufactured into products BS 14001 accredited factory in Dumfries. This is the only factory in the UK capable of recycling these waste materials, the only other legal option for farmers is landfill!

does not rot, splinter, discolour or degrade with age. It is maintenance free, is resistant to most chemicals and can itself be fully recycled at the end of its working life.

### ROUND BASED BOLLARDS

Round Based Bollards are available in a range of diameters. Included in the price is a choice of tops, also included is a choice of banding. All Round Based Bollards are black and 1500mm in length.
