

COUNTER SUNK BOLLARD

This new version will fill the void between the more expensive heavy duty version and the budget above ground folding bollards. Ground box and lid are supplied galvanised with the plain steel bollard available galvanised or galvanised and polyester powder coated. The bollard can also be provided in stainless steel to give a more contemporary look.

When not in use the bollard sits in a below ground box. With simple lift and drop movement the bollard is locked in the vertical position. Three different tops can be supplied to match other bollards from our range.

Bollard height above ground: 675mm
Box size: 1000 x 150 x 150mm
Box depth: 150mm
